

Ultra-Fine Headnet

Are tiny biting insects ruining your outdoor experience? Do midgies, black flies, no-see-ums or sandflies gravitate towards you, leaving you with itching welts once they've had their way with you? Then maybe consider upgrading your headnet to our new, ultra-fine mesh. More than 4 times finer than our existing mosquito mesh, even the smallest biting insects won't be able to squirm their way through, leaving you bite free.

Ultra-Fine Mesh

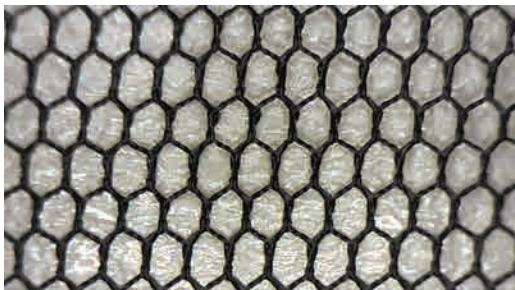

Our regular mosquito mesh and our ultra-mesh both offer the protection of 500 holes per square inch - fantastic protection against mosquitos, but a little large when the biting insects minaturise. This new, Ultra-Fine Mesh, with over 2000 holes per square inch, is the finest mesh fabric that we've been able to source, guaranteeing that even the smallest biting insects won't be able to get through.

Black mesh for improved visibility

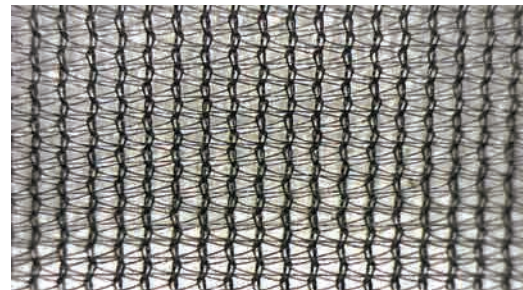

As with all of our insect protection products, the Ultra-Fine Headnet is a black mesh to ensure maximum visibility when in use.

Superlight elasticised neck draw cord with cord lock.

Comes packaged in a handy stuff sack for easy organisation

Regular 500 holes per square inch

New Ultra-Fine mesh.
Over 2000 holes per square inch.
