

Air Seats

Using the same technology as our Award winning Air Sprung Cell Sleeping Mats, our Air Seats provide padding for your posterior while packing into a paltry parcel that easily fits into a pocket. They're a great alternative to sitting on damp or uncomfortable ground, and the perfect companion for any sporting or stadium event.

Air Seat is made from a durable 75 Denier Polyester top and base.

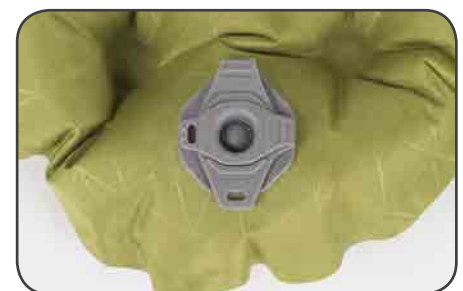

Air Seat Insulated is made from 30 Denier Polyester top and a durable 75 Denier Polyester base, and is filled with THERMOLITE® insulation. This makes it a better option for sitting on cold sucking concrete benches or when sipping Gluhwein in the snow.

Mini Flat Valve

The Air Seats incorporate our new 'mini valve', which is a scaled down version of the valve which is found on all of our sleeping mats. The mini valve is a little lighter, and a smaller profile that our regular valve so that it helps the product pack down even smaller. It still offers a large inflate and deflate bore to ensure that the Air Seat is quick to set up or pack away. The mini valve also includes the option to fine tune the pressure in the seat to that desired by your derriere.

Generous Dimensions

The Air Seats provide a generous sizing, and fit comfortably on most stadium seats. Each measures 30cm by 40cm, and is 5cm thick once inflated.

Air Seats

Code	Style	Weight	Colours	Barcode
AMAS	Air Seat	70g 2.5oz	Green	9327868067091
AMASINS	Air Seat Insulated	80g 2.8oz	Lime	9327868067107
